

EDWIN ERNESTO FIGUEROA HERNÁNDEZ

Senior Full-Stack Engineer · DevOps

El Salvador (UTC-6, overlaps U.S. time zones)

PROFESSIONAL SUMMARY

Systems Engineer with over 6 years of experience building and deploying web and mobile applications for clients in banking, fintech, and the automotive sector. Specialized in React, Angular, and Vue.js, along with Node.js, with a solid backend foundation in Java/Spring Boot. Experienced working with Linux environments, Docker containers, Kubernetes, Git/GitHub, and cloud platforms such as AWS. Knowledge of Infrastructure as Code using Terraform and CloudFormation, AWS service administration, and DevOps practices focused on automation and continuous delivery. Able to collaborate across development and infrastructure teams to ensure scalable, secure, and highly available applications.

ABOUT ME

Email: edwinprogramador@gmail.com

Phone: +503 7484-6978

LinkedIn: <https://www.linkedin.com/in/edwin-figueroa7>

URL: edwindevops.vercel.app/es

TECHNICAL SKILLS

Frontend: React, Angular, Vue.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS.

Backend: Node.js, Express, NestJS, Java, Spring Boot, Laravel, REST APIs

Databases: PostgreSQL, MySQL, MongoDB, Oracle, SQL Server.

Mobile: React Native, Flutter, Ionic.

DevOps and Tools: AWS Cloud knowledge (EC2, Lambda, RDS, VPC), Infrastructure as Code knowledge (Terraform and CloudFormation), Azure DevOps, Linux, Docker, Kubernetes, Git, and GitHub.

Practices: Agile/Scrum, code review, automated testing, process automation.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer

Jan 2025 – May 2026

DEVINTECH — clients: Grupo Q / CrediQ, Localiza S.A. de C.V.

- Designed and implemented biometric authentication (fingerprint and facial recognition) in Grupo Q's main mobile app using Ionic, later Flutter, integrating native Android and iOS APIs and the backend with Java/Spring Boot; strengthened login security and reduced access friction for users.
- Developed end-to-end the digital vehicle quotation and request flow in the negotiations app (frontend in Ionic and Angular, REST APIs and services in Java/Spring Boot), integrating business rules, validations, and internal service consumption so the client could complete the entire process online without manual intervention.
- Built a metrics and performance-history module for used-car salespeople, with an Angular frontend and Laravel APIs on a relational database (PostgreSQL), generating reports and dashboards that gave management real-time visibility into commercial performance.
- Added new features to CXPS, Localiza's fleet GPS tracking system, working on Thymeleaf web applications connected to REST APIs with Java/Spring Boot, and delivered continuous improvements to production products within a remote, multi-client team.
- Deployed and managed applications on Linux servers (Nginx/Tomcat configuration as a reverse proxy, environment variables, certificates, and systemd services), ensuring stability and availability of development and production environments.

- Containerized applications with Docker (optimized multi-stage Dockerfiles and local orchestration with Docker Compose for app and database), standardizing development and production environments and eliminating inconsistencies between team machines.
- Managed version control with Git and GitHub applying branching workflows (feature branches and Pull Requests), peer code review, and conflict resolution in a distributed team.
- Participated in CI/CD (continuous integration and deployment) pipelines that automated build, testing, and deployment on push to the repository, reducing manual work and accelerating the delivery of new versions to production.

Full-Stack Developer

May 2024 – Dec 2024

LEAGUE (apparel manufacturer for U.S. universities) — Information Technology

- Developed the government-mandated electronic invoicing system (frontend with React.js and backend in Node.js on SQL Server, generation and signing of tax documents and integration with the Ministry of Finance service), ensuring the company's tax compliance and eliminating the manual invoicing process.
- Built a web application (React on the frontend and Node.js on the backend) for the generation and printing of ID cards serving 800 employees, automating a previously manual process.
- Developed internal tools and business-metrics dashboards with Node.js, React, and Laravel on SQL Server, integrating optimized queries and visualizations that automated manual reports and supported decision-making for the finance area.
- Deployed and maintained applications on Kubernetes clusters (defining Deployments, Services, and ConfigMaps in YAML manifests, scaling replicas, and zero-downtime updates), ensuring availability of internal services.
- Monitored and supported services deployed on Linux infrastructure, reviewing logs, resource usage, and container metrics to detect and resolve incidents before they affected users.

Software Developer (Analyst Programmer)

Nov 2023 – Mar 2024

Óptimas Consultores — client: Banco Agrícola (banking)

- Supported the migration of the Oracle database from 11g to 12c in a banking application serving thousands of users, optimizing PL/SQL queries and indexes and measurably improving backend response times, with zero service interruption.
- Executed the migration of Oracle Forms (6i to 12.2), validating form compatibility and business logic and ensuring zero data loss throughout the process.

Network & Technical Support Specialist

Aug 2021 – Apr 2023

WebHelp (Claro account) — Telecommunications

- Maintained the Data Center network, configuring VLANs, subnets, and IT infrastructure firewalls (a direct foundation for cloud networking concepts such as VPC, subnets, and Security Groups), ensuring reliable connectivity for business operations.
- Provided technical support and monitoring of network infrastructure and services, diagnosing and resolving connectivity incidents to maintain the operational continuity of the account.

Software Developer (Analyst Programmer)

Sep 2020 – Mar 2021

Xuret — Information Technology

- Redesigned web application interfaces with JavaScript, HTML5, and CSS3, modernizing the user experience (UX) and improving the usability and visual appearance of the client's products.
- Extended the sales-process software of an external company, developing new features in Java and Node.js with MySQL and Oracle databases, and integrating business logic with the client's existing systems.

SELECTED PROJECTS & LIVE DEMOS

Full portfolio of 15+ deployed applications (React, Node.js, MERN, Angular).

Highlights:

- MERN Patient Manager (APV) — full CRUD app with auth: demo-mern-apv.vercel.app
 - Real-Estate Listing Platform: demo-app-realstate.netlify.app
 - Meeti Events App: demo-app-meeti.netlify.app
 - Crypto Price Quoter (React): demo-app-cotizadordcripto.netlify.app
 - Food Delivery App: demo-app-delivery.netlify.app
 - Shopping Cart / E-commerce: demo-app-carrito.netlify.app
-

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Systems Engineering 2023

Universidad de El Salvador

AI Expert Engineer — Specialization (in progress) 2025 – 2026

Online

Professional Certifications

- MongoDB Developer Certification (2019)
- Digital Marketing & Web Analytics — Neetwork Business School, Spain (2022)
- WordPress, E-commerce & Conversion Funnels — Neetwork Business School, Spain (2020)

LANGUAGES

Spanish — Native

English — Professional working proficiency (reading & writing strong)
